ORDER DIRECT

Rigging tools from a working aircraft shop.

Papa-Alpha Tools are built by RWAS for mechanics who need repeatable Piper control-surface rigging references without improvising fixtures on the hangar floor.

For aircraft maintenance use by qualified personnel. Verify applicability to aircraft model and serial number before use. Product availability, pricing, and kit contents may change; live Shopify collection controls current order information.

PAPA-ALPHA TOOLS

Piper rigging tools, made by mechanics.

CNC · FIBER LASER · POWDER COAT · UV PRINT

 Papa-Alpha rigging tool kit

Aircraft-grade aluminum tools for Piper Papa-Alpha airframes — precise, durable, lighter than shop-made steel fixtures, and ready for real hangar work.

OTC checkout. Browse the live collection, select the correct tool or kit, and ship direct from RWAS.

WHY SHOPS BUY THEM

Less guesswork. Better repeatability.

1 Purpose-built references

Designed around Piper control-surface rigging tasks so the mechanic has a repeatable fixture instead of a one-off shop workaround.

2 Modern shop construction

CAD-modeled, CNC-routed or fiber-laser cut from aircraft-grade aluminum, then powder coated and UV printed for durability.

3 Built with usability in mind

Weight-reducing design, clean markings, and protractor-friendly details where applicable make the tools easier to handle on the aircraft.

4 Made by a working Part 145 shop

RWAS uses the same practical maintenance mindset on these tools that it brings to avionics, A&P, NDT, and fabrication work.

“Made by professional mechanics for professional mechanics.”

Same-day focus

Built and fulfilled from Yankton when inventory allows.

Worldwide delivery

We sell internationally all over the world.
